A: This is a common problem caused by the different encoding of one of the files. Try to change the encoding of your python interpreter, you may need to open this file with the same encoding or save it with the same encoding. If not work, and still using Python 2.x, try replacing the file. Try different encodings if you got any error. Patience and hope were on display at the 84th Academy Awards in Hollywood. While it was a bit of a distant third, Disney's "The Lion King" broke a record for a 3D release, getting four nominations including best picture. It was a nice moment in Hollywood history, but the event wasn't a total success. Jay and Seth are two of the most recognizable voices on the internet, but they didn't show up in person for the Oscars. Jay tweeted he was watching the show on TV and he was "embarrassed" for Seth. Seth was in the same boat, and he felt "embarrassed" for Jay. The two knew what was up, and they both claimed they were fine with it. If you look closely at the tweets, you'll notice they're both talking about it in the third person. Jay and Seth are looking at the Oscars on TV and when another person says something, they read it off and respond to it. Jay said: "sadly, that was Jay & Silent Bob's burning man quote." Seth responded: "but everyone's ripping on jay and i for it. relax, listen to the Oscars with us, watch the Oscars with us" They put on a happy face and pretended like everything was fine. We're not perfect, but we pride ourselves on

1.00 MB Computer hardware and peripheral items are covered by classifications (as will be described in greater detail in Section 5.2). The reasons for classification of computers are most commonly as follows: 1. Information and communication technologies (ICT): The classifications of some new ICT products are not yet fully clarified due to their speed of development. They include personal computers, personal digital assistants (PDAs), digital mobile phones and digital video cameras. 2. Documentation systems: Data documentation systems are classified using the ISO/IEC 15752 series classification methodology. This includes word processors, presentation programs and applications programs that are used to store, edit, create or modify data. 3. Automatic data processing devices (ADPs): The classifications of some new automatic data processing (ADP) devices are not yet fully clarified due to their speed of development. They include automated teller machines (ATMs), scanner devices and electronic typewriters. 4. Monitor and display units: These are classified by the types of display (CRT, LCD, etc.) and the classification includes display units for computers, televisions and other electronic devices. 5. Video communications: The classifications of some new devices used for voice and video communications are not yet fully clarified due to their speed of development. They include transcoders, cameras and TV/video remotes. 6. In recent years, some semiconductor products have been included as well as several new product categories, which do not yet have internationally accepted or universally accepted classifications (as of September 2015). The IEC and ISO classifications are currently not used for these products. 7. New product categories have been created for a number of reasons including the development of such new products as multifunctional devices, enabling mobile devices to convert between digital and analog. Incidental information The explanations used above are not intended to imply a standard classification methodology. In most

---

cases, different classification systems or similar systems can be used to classify a product. But the principle behind such classifications can be summarised as follows: a product must be separated into different categories based on its function. Classification for multimedia systems The use of multimedia and multimedia systems has become widespread over the past few years and the ISO 9241 series has been developed to classify multimedia products. For the purposes of this publication, a multimedia system includes any system that includes at least a tangible computer and tangible output (visual or auditory). Therefore
