# Definition & Purpose

## Video Editing

Video editing is a process in which editor refine raw footages, clips and make a finished video. In this process there are various of steps involve like removing of unwanted part, adding color, etc.

## Visual Effects

VFX is a process in which editors manipulate various images, structure and elements to bring imagination into reality. This process is performed using different types of advance animation effects.

# So, What's the Real Difference?

- Video Editing is the art of shaping the story.
- VFX is the science of making visual effects which cannot be performed in real.

Editors build the narrative, VFX artists give realistic effect to them. Both the fields are important for today's digital industry and roles.
